Are they talking about a soil method, or water?

Hi John ,

Just to provide up date on the method development ;

1: we are running calibration curve , should be done by 11:40 Pm to day

2. We are in process of deciding sample extraction method , hope to have answer some time in next 48 hours .

3. Once we finalize extraction method , will let you know the tentative date for your samples results .

4. If everything as planned the detection limit will be between 0.5 to 1.0 ppb

5 . Planning to leave the lab before midnight .

6 will start working in lab around 7:00 am tomorrow .

7 finally the only cost involved for you is contractor cost , I am working in the lab with contractor to speed up the process and no hours will be charged by me starting Friday evening to Monday .

Thanks for your support .

Raj
